Background, Objective, and Key Assumptions

Background, Objective and Key Assumptions

Background

Housing Trends, LLC was retained by The Krausz Companies to assess the viability of the Subject location and make product and rental rate recommendations that will maximize revenue and lease-up period at the proposed community located in St. Charles, Kane County, Illinois. The Subject is currently planned to consist of approximately 517 multi-family rental units and 139 townhome rental units.

Objective

The objective of this assignment was to compile and evaluate pertinent housing information in order to provide product, pricing and absorption projections for the recommended product type. To achieve the objective of this assignment, information on the Subject was reviewed, the Subject site was visited, and information was compiled and analyzed on active rental communities and private rental units in the Target Market Area (portions of Kane and DuPage Counties).

Key Assumptions

It is important to note that our rental rate recommendations and lease-up targets assume certain parameters regarding project execution. To achieve the rental rates and lease-up rate reflected in this report, it is assumed that the community will: 1) offer floor plan sizes and types as proposed, 2) be executed in a quality “market appropriate” manner with a community entrance, monumentation, landscaping, amenities, spec levels, and unit finishes in-line with market expectations, 3) have advertising and marketing efforts generating qualified shopper traffic commensurate with market comps achieving comparable sales rates, 4) have an on-site leasing office open seven days per week, 5) have fully decorated model homes reflecting each product type, and 6) have experienced leasing agents familiar with the local market. In terms of product, as a general guide we have assumed that product would be commensurate with other new home communities in the Target Market Area. If the Builder does not meet these conditions, it could have adverse impacts on project performance that could impact achievable rental rates and/or lease-up rates.

Executive Summary

Executive Summary – Methodology

In order to recommend rental rates and to estimate lease-up times, we primarily analyzed five factors:

1. One of the key factors in determining the success of any rental community are **locational factors**. These factors include proximity to employment, proximity to shopping, proximity to medical facilities, proximity to recreation and the relative strength of the school district
2. We analyzed **actively renting apartment communities** in the Competitive Market Area (CMA), which we defined as a 7.5-mile radius from the Subject site. The actively renting communities demonstrate the natural demand for rental communities within the CMA.
3. We analyzed **actively listed private rental townhome units** in the CMA.
4. We utilized our **proprietary rental demand model** to help determine the estimated annual demand for new rental units within the CMA. This model determines how many renters in certain age categories and in certain income categories are most likely to be renters in the CMA.
5. The **demographics and economics** of the local area are critical in determining the viability of a successful rental community.

Executive Summary – General Observations

- The Chicago Metropolitan Statistical Area (MSA) has started to experience a slowdown due to persistently high interest rates and an uncertain economy impacting overall economic conditions. In January 2022, the employment growth rate in the Chicago MSA was 5.1%. However, by March 2025, it had fallen to just 0.1%, marking the slowest growth rate since the end of the Covid-19 pandemic..
- Despite a decline in employment growth, single-family building permit activity in the Chicago Metropolitan Statistical Area (MSA) has reached its highest level in 18 years, which is the most significant increase since before the Great Recession. However, it is important to note that this level of building permit activity is still below the levels observed prior to the recession.
- Existing home sales activity has significantly slowed over the past two years due to rising mortgage rates, which have caused many potential homebuyers to pause their search. At the same time, sellers have been hesitant to list their homes for sale, resulting in historically low inventory levels. Recently, however, existing home sales volume has started to stabilize. As home sales cool, many potential homebuyers are choosing to rent instead, leading to a record-high demand for rental units in the Chicago Metropolitan Statistical Area (MSA).
- Recent studies show that the Covid-19 pandemic and the shift to telecommuting have enabled workers, who would typically commute to busy employment centers, to relocate to more distant suburbs that offer better outdoor amenities. These workers may be working from home full-time or commuting to their workplace one or two days a week. As a result, the appeal of suburban areas with strong amenities, good schools, ample outdoor recreational options, and convenient access to shops and restaurants has increased.
- Renters are now searching for new Class A rental communities that offer high-end amenities. Recent surveys show that the most desired amenity is walkability to restaurants, shopping, and other services. Other popular amenities include dog parks, swimming pools, outdoor gathering areas, clubhouses with theater rooms, pickleball courts, and electric vehicle charging stations.

Executive Summary – Potential Rental Demand – 7.5-Mile Radius

- In order to analyze rental demand at the Subject site, we implemented our proprietary rental demand model. The model takes into account households by income and age cohorts along with historic percentage of renters in the market, demand from existing renters (renter turnover) and demand from newly formed households. The results of the demand analysis estimate demand by age (target market) and income.
- For this analysis, we used a Competitive Market Area of a 7.5-mile radius (CMA) from the Subject site. Studies have shown that this is a typical range that renters will travel for a new rental community.
- Based on our rental demand model, there is sufficient demand for approximately 543 new rental units annually within 7.5 miles of the Subject site.
- Based on our recommended base rental rates, it will take a household income of above \$50,000 in order to rent a unit at the Subject. This income level is well within the demographic profile of the local market area. According to the rental demand model, there is demand for approximately 411 new rental units annually with incomes above \$50,000 in the Competitive Market Area.
- In the 7.5-mile CMA, an average of 168 multi-family building permits have been issued annually over the past five years. This suggests that there is an annual undersupply of approximately 243 rental housing units, given the demand of 411 units per year.
- Demand for new rental units in the CMA is primarily driven by renters aged 25-44 (59%), with a notable secondary demand of 25% from the 55+ age group.
- To further analyze demand in the local market, we reviewed births by decade, which shows anticipated long-term demand. The primary target market for a rental community are millennials, generally aged 25 to 44. According to births by decade, the demand from this age group will continue to be extremely strong through 2035, before tailing off slightly.
- The main factors contributing to the success of rental communities in this region include proximity to employment opportunities, access to shopping, services, and restaurants, as well as the strength of the local school district. The property in question is situated near several restaurants and entertainment options, including a pickleball facility and a movie theater, as well as a Starbucks. It is located just 2.5 miles east of downtown St. Charles, which offers many restaurants, shops, and festivals. Additionally, the property is within the St. Charles School District #303, known for being one of the top-performing school districts in the western suburbs.

Executive Summary – Recommendations

- Based on the results of the Rental Demand Analysis and the performance of the comparable communities in the CMA, Housing Trends, LLC recommends the following product types:
- We recommend incorporating a substantial number of four- or five-story, flat-over-flat apartment units. These buildings should include elevators to accommodate renters aged 55 and over in the local market. We suggest offering studio, one-bedroom, and two-bedroom units as part of this development.
 - The studio units should range from approximately 600 to 650 square feet, with base rental rates between \$1,650 to \$1,700, which translates to approximately \$2.62 to \$2.75 per square foot.
 - The one-bedroom units should range from about 700 to 900 square feet, with base rental rates from \$1,900 to \$2,200, or about \$2.44 to \$2.71 per square foot.
 - The two-bedroom units should range from approximately 1,000 to 1,200 square feet, with base rental rates between \$2,250 and \$2,450, or around \$2.04 to \$2.25 per square foot.
- These recommended rental rates position the development near the top of comparable communities, which is justified due to its high-quality location and proximity to dining, shopping, and other services. This type of housing will primarily attract Millennials seeking a highly amenitized community in a desirable suburb. Additionally, it will appeal to renters aged 55 and older who are looking for single-level living in a community with ample amenities and restaurants within walking distance.
- We also recommend three-story, rear-loaded rental townhome units at the Subject. We recommend offering two- and three-bedroom units that will appeal to young singles, young married couples and young families. These segments will be attracted to this product because of the attached, two-car garages, high-quality schools, proximity to dining and shopping and robust amenities.
 - We recommend that the two-bedroom units range in size from approximately 1,325sf to 1,400sf with base rents ranging from \$2,750 to \$2,850 or \$2.04/sf to \$2.08/sf.
 - The three-bedroom units should range in size from 1,500sf to 1,600sf with base rents ranging from \$2,950 to \$3,050 or \$1.91/sf to \$1.97/sf.
- In order to compete effectively with the newly-built comparable communities in the CMA, we recommend offering a robust amenity program. These amenities should include a clubhouse with a media room, catering kitchen, lounge area and game area, state-of-the-art fitness center, a resort-style outdoor swimming pool with sundeck, grilling stations with outdoor dining and firepits, dog park and pet spa, EV charging stations and walking paths that connect directly to Fox Haven Square and other adjacent restaurants and coffee shops.

Executive Summary – Potential Rental Demand – 7.5-Mile Radius

According to our rental demand model, there is demand for approximately 411 new rental units within a 7.5-mile radius annually and with a median household income above \$50,000 (rental rates above \$1,250/mo.). Please see appendix for the complete Rental Demand Analysis.

| Rental Rate | Annual Demand for Newly Built Rental Units 7.5-Mile Radius |
|-----------------|---|
| \$875-\$1,249 | 68 |
| \$1,250-\$1,874 | 102 |
| \$1,875-\$2,499 | 76 |
| \$2,500-\$3,749 | 58 |
| Over \$3,750 | 175 |

Source: ESRI, Housing Trends, LLC

Executive Summary – Potential Target Market – 7.5-Mile Radius

The majority of rental demand (57%) in the local market comes from individuals under 44 years old. This group typically includes singles, young couples, and young families. Additionally, there is a secondary market for renters aged 55 and older, accounting for 25% of the demand.

| Rental Rate | Annual Demand % 7.5-Mile Radius |
|-------------|------------------------------------|
| Under 25 | 3% |
| 25-34 | 28% |
| 35-44 | 29% |
| 45-54 | 15% |
| 55-64 | 11% |
| 65+ | 14% |

Source: ESRI, Housing Trends, LLC

Executive Summary – Competitive Market Area – 7.5-Mile Radius

In order to assess new home demand, we primarily used data a 7.5-mile radius as the primary market area, which is outlined in red below.

Executive Summary – Future Demand – Births by Decade Summary

Housing Trends demand models are effective at forecasting demand over the next five years. However, typically economists forecast models only project population and household growth for a five-year period. However, it is important to look at birth by decade to identify future trends, beyond five years:

- It is clear to see why active adult and rental units have been, and continue to be, so popular as births between 1956 and 1964 (ages 57 to 65) and 1985 and 1993 (ages 28 to 36) were extremely high. These age groups typically make up the majority of renters and active adult buyers.
- Move-up homebuyers have been diminishing over 10 years, primarily due to the relatively small number of births from 1967 to 1978 (ages 43 to 54), which are primary move-up buyer ages.
- There was a large increase in births beginning in 1980 through 2008. Beginning in 2009, the birth rate began to fall and this trend has continued through 2020.
- Those born between 1998 and 2010 (currently ages 12 to 24), will be the primary renter pool. These were high birth years, so we expect demand to remain strong for renters over the next 10+ years.
- After 2010, births began to tail off again. This indicates that the rental demand may begin to decrease slightly in 11 or 12 years.

The Births by Decade chart shows that there will be significant demand for rental units for at least the next 10 to 15 years.

Note: legally foreign-born residents add between 12% and 15% to the total new population each year. Generally, those born overseas and then immigrating to the U.S. peaks when a person is approximately 30 years old. In other words, there is very little legal immigration among children as the chart on the following page shows.

Executive Summary – Potential Demand – Births by Decade

Executive Summary – Primary Comparables Summary

The table below provides a summary of the key metrics for each of the primary apartment communities in the CMA. When comparing the key comparables, the Subject's average low rental rate for the multi-family units on a per square foot basis is \$2.36/sf, which is above the average low rental rates at the key competitors (\$2.19/sf).

| COMMUNITY | PRODUCT TYPE | CITY | YEAR BUILT | BASE RENT RANGE | AVERAGE UNIT SIZE | RATE | | PRICE SUMMARY OF COMPETITORS | | | | | |
|---------------------------|--------------|--------------|------------|-----------------|-------------------|--------|----------|------------------------------|---------------|--------------------|-------------------|------------------------|-------------------------|

Executive Summary – Product and Pricing Recommendations Summary

The table below details the product and rental rate recommendations for the Subject. We are estimating a 3% average premium for the Subject. Based on the demand analysis, we believe that the planned unit sizes, configurations and mix are appropriate for the Competitive Market Area. These units will primarily appeal to Millennial and 55+ renters.

| | | | | MIX | | PRODUCT | | | | | HOUSING TRENDS RECOMMENDED | | | | | | | | | | | | | | |
|--|-------|-------|---|--|---------|--------------------|------|-------|----------|-----------|----------------------------|---------|---------------------------|---------|---------|---------|--------------|--------|---------|--------------------|--------|-----------------------|--------|---------|--------|

Source: Housing Trends, LLC

*Notes:

1/ Parking type definitions:

O = Open

C = Carport

A = Assigned Space In Lot

DAG = Direct Access Garage

AG = Attached Garage (No Direct Access)

DG = Detached Garage

2/ All concessions are translated into a monthly discount on rent, as follows:

Direct = A direct discount to the normal rate.

Indirect = Other discounts, such as "\$500 off the first month".

Executive Summary – Product and Pricing Array

Table and chart below show the product array of the recommended product types. This product array will appeal to a wide range of renters in the market.

| Product | Product | Number of Floors | Total # of Lots/Units | Unit Size Range (Square Feet) | Unit Size Avg (Square Feet) | BASE RENT - TODAY'S MARKET | | | Concessions | NET BASE RENT | | NET AVERAGE RENT | | Estimated Lease-Up Rate |

Executive Summary – Rent Appreciation and Potential Lease-Up

Rental rate appreciation is expected to increase by 3.0% in 2025 (the rate below is pro-rated for the final eight months of the year), and by 3.0% in 2026 and 2027.

We are conservatively anticipating absorption of approximately 20 units per month or 240 units annually at the multi-family units and 14 units per month or 168 annually at the townhome units.

| Average Net Rent Appreciation * | | | | | 2.0% | 3.0% | 3.0% | 2.0% |

* Annual rent change forecast figure for 2025 based on MPF Research metro summary for 3Q 2024; 2026-2028 estimated by Housing Trends, LLC based on projected market fundamentals

Location Analysis

A satellite map of the Chicago metropolitan area with several locations marked. A red star labeled 'Subject' is located in the western part of the map, near St. Charles. Three colored circles represent distances from the Subject: a purple circle for 'Geneva Metra Station (5.0 Miles)', a blue circle for 'O'Hare Int'l Airport (27 Miles)', and an orange circle for 'Downtown Chicago (35 Miles)'. Another blue circle labeled 'Midway Airport (35 Miles)' is also shown. Major highways (Interstates 290, 55, 54, 355, 88, 90, 94) and local roads are visible. Various suburbs are labeled, including Hoffman Estates, Schaumburg, Elk Grove Village, Park Ridge, Skokie, Des Plaines, Addison, Elmhurst, Lombard, Wheaton, Oak Brook, Cicero, North Aurora, Aurora, Montgomery, Boulder Hill, Naperville, Woodridge, Bolingbrook, Bridgeview, and Oak Lawn. A text box in the top right corner states 'Distance from Subject in parentheses'.

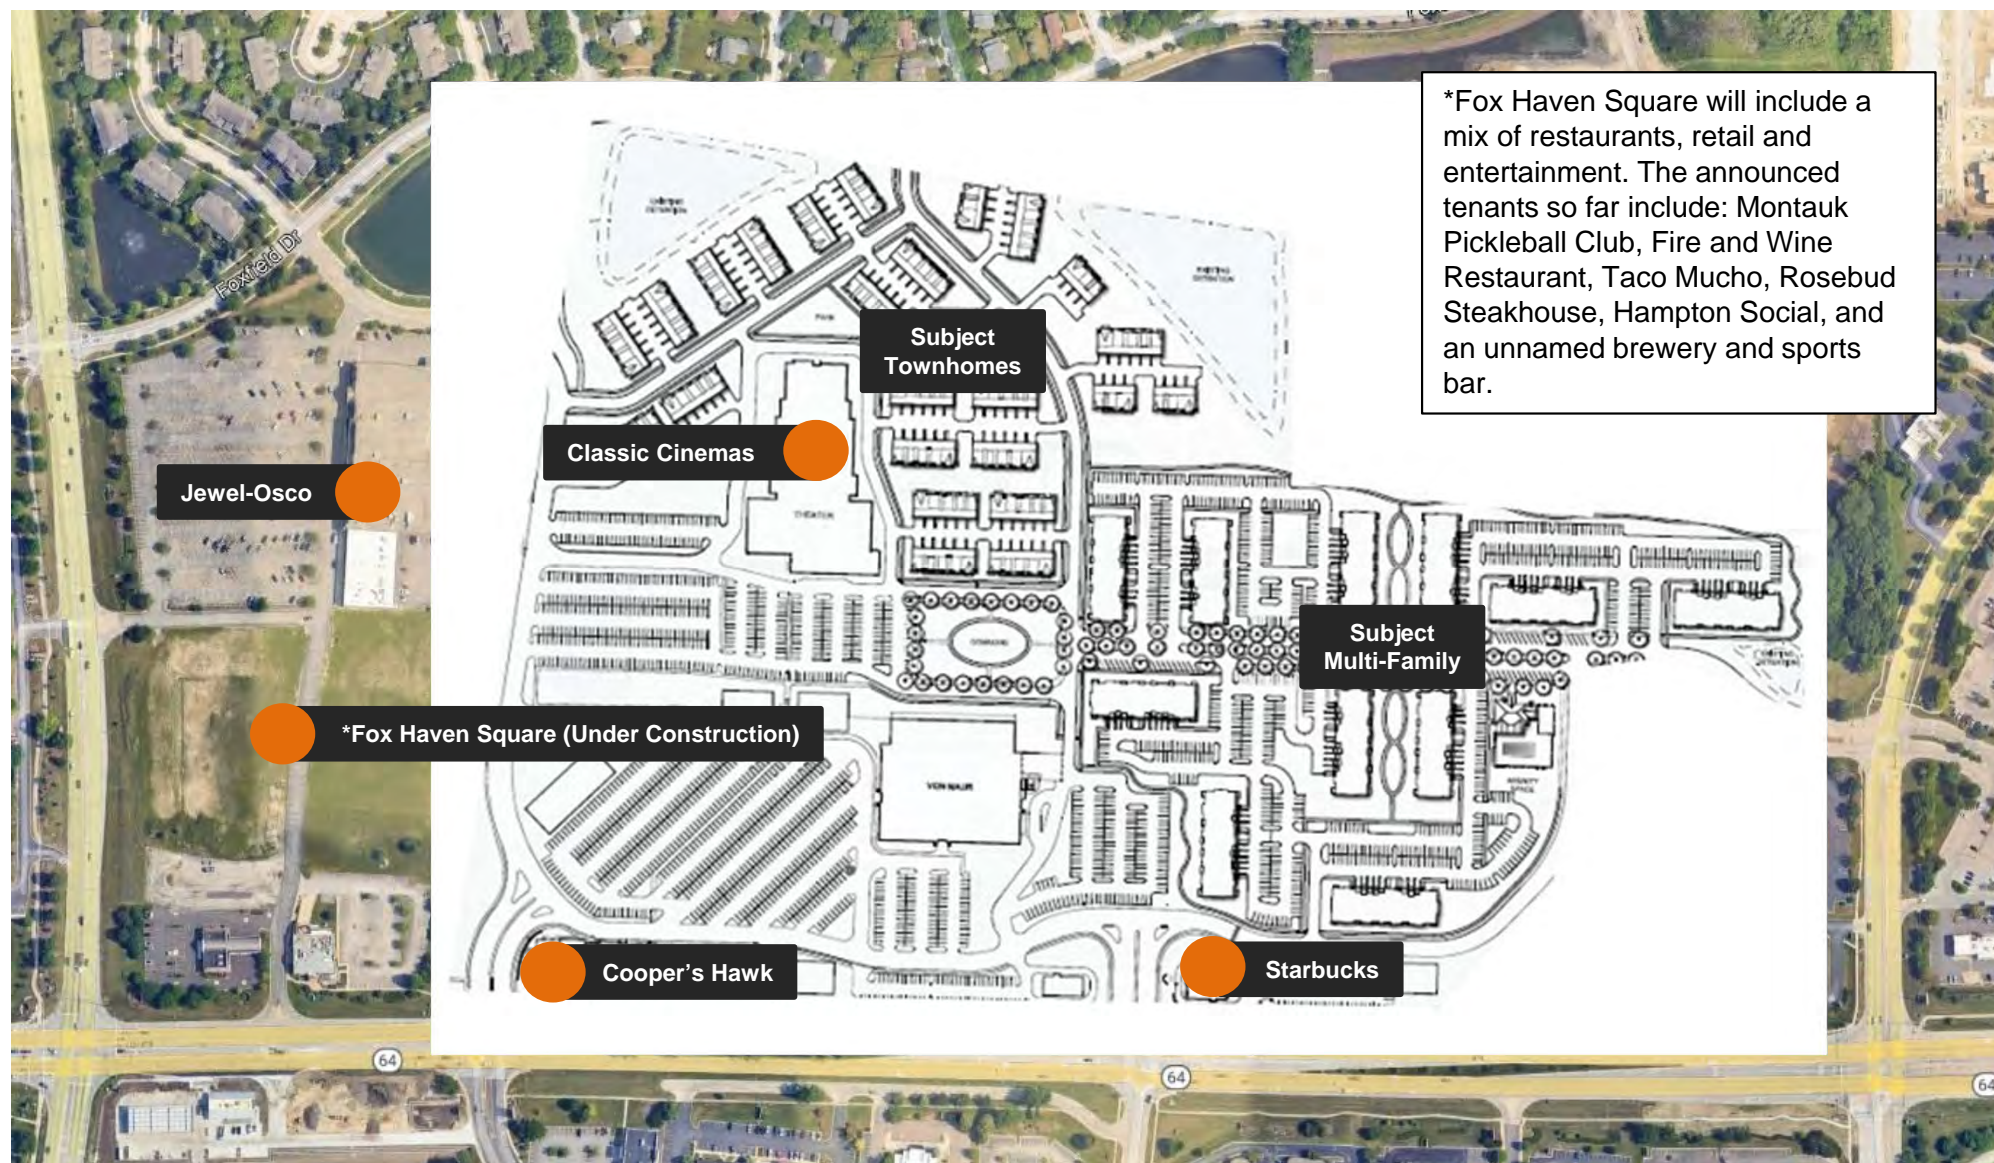

Location Analysis – Subject Site Location

The site is ideally located on the east side of St. Charles at the site of the Charlestowne Mall.

Location Analysis – Subject Preliminary Site Plan

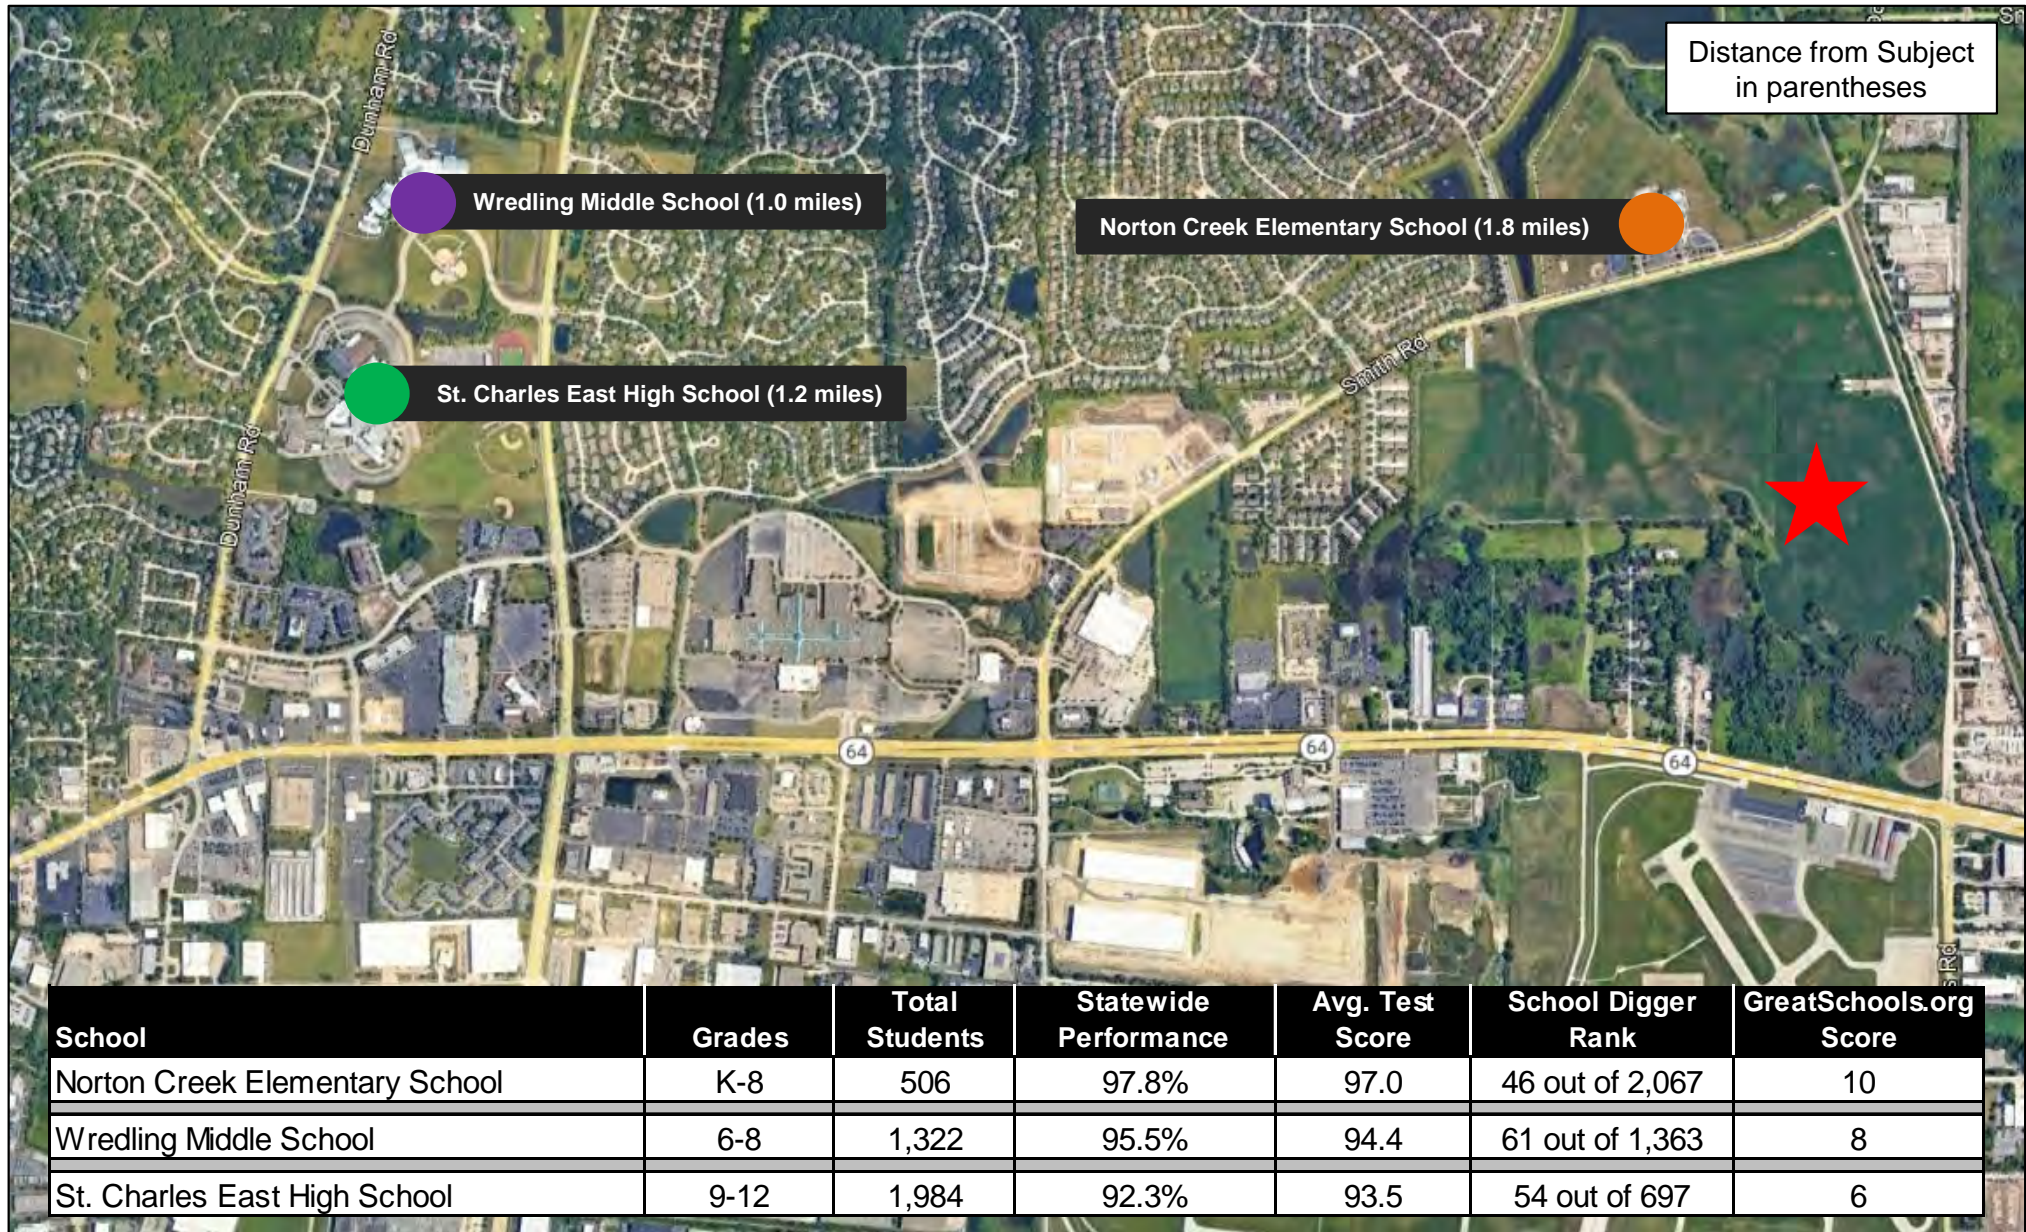

The Subject will be a part of the revitalized Charlestowne Mall and is located adjacent to Main St. (IL 64) and just west of Kirk Rd. Shopping, dining and service are walkable from the Subject, which will add value to both the Subject development as well as the neighboring retail areas.

Location Analysis – Assigned Schools and Performance

The Subject is located in the St. Charles School District #303. The St. Charles School District is highly regarded and the assigned schools are score in the top 10% in the State of Illinois based on standardized testing.

Location Analysis – Commute Time Map

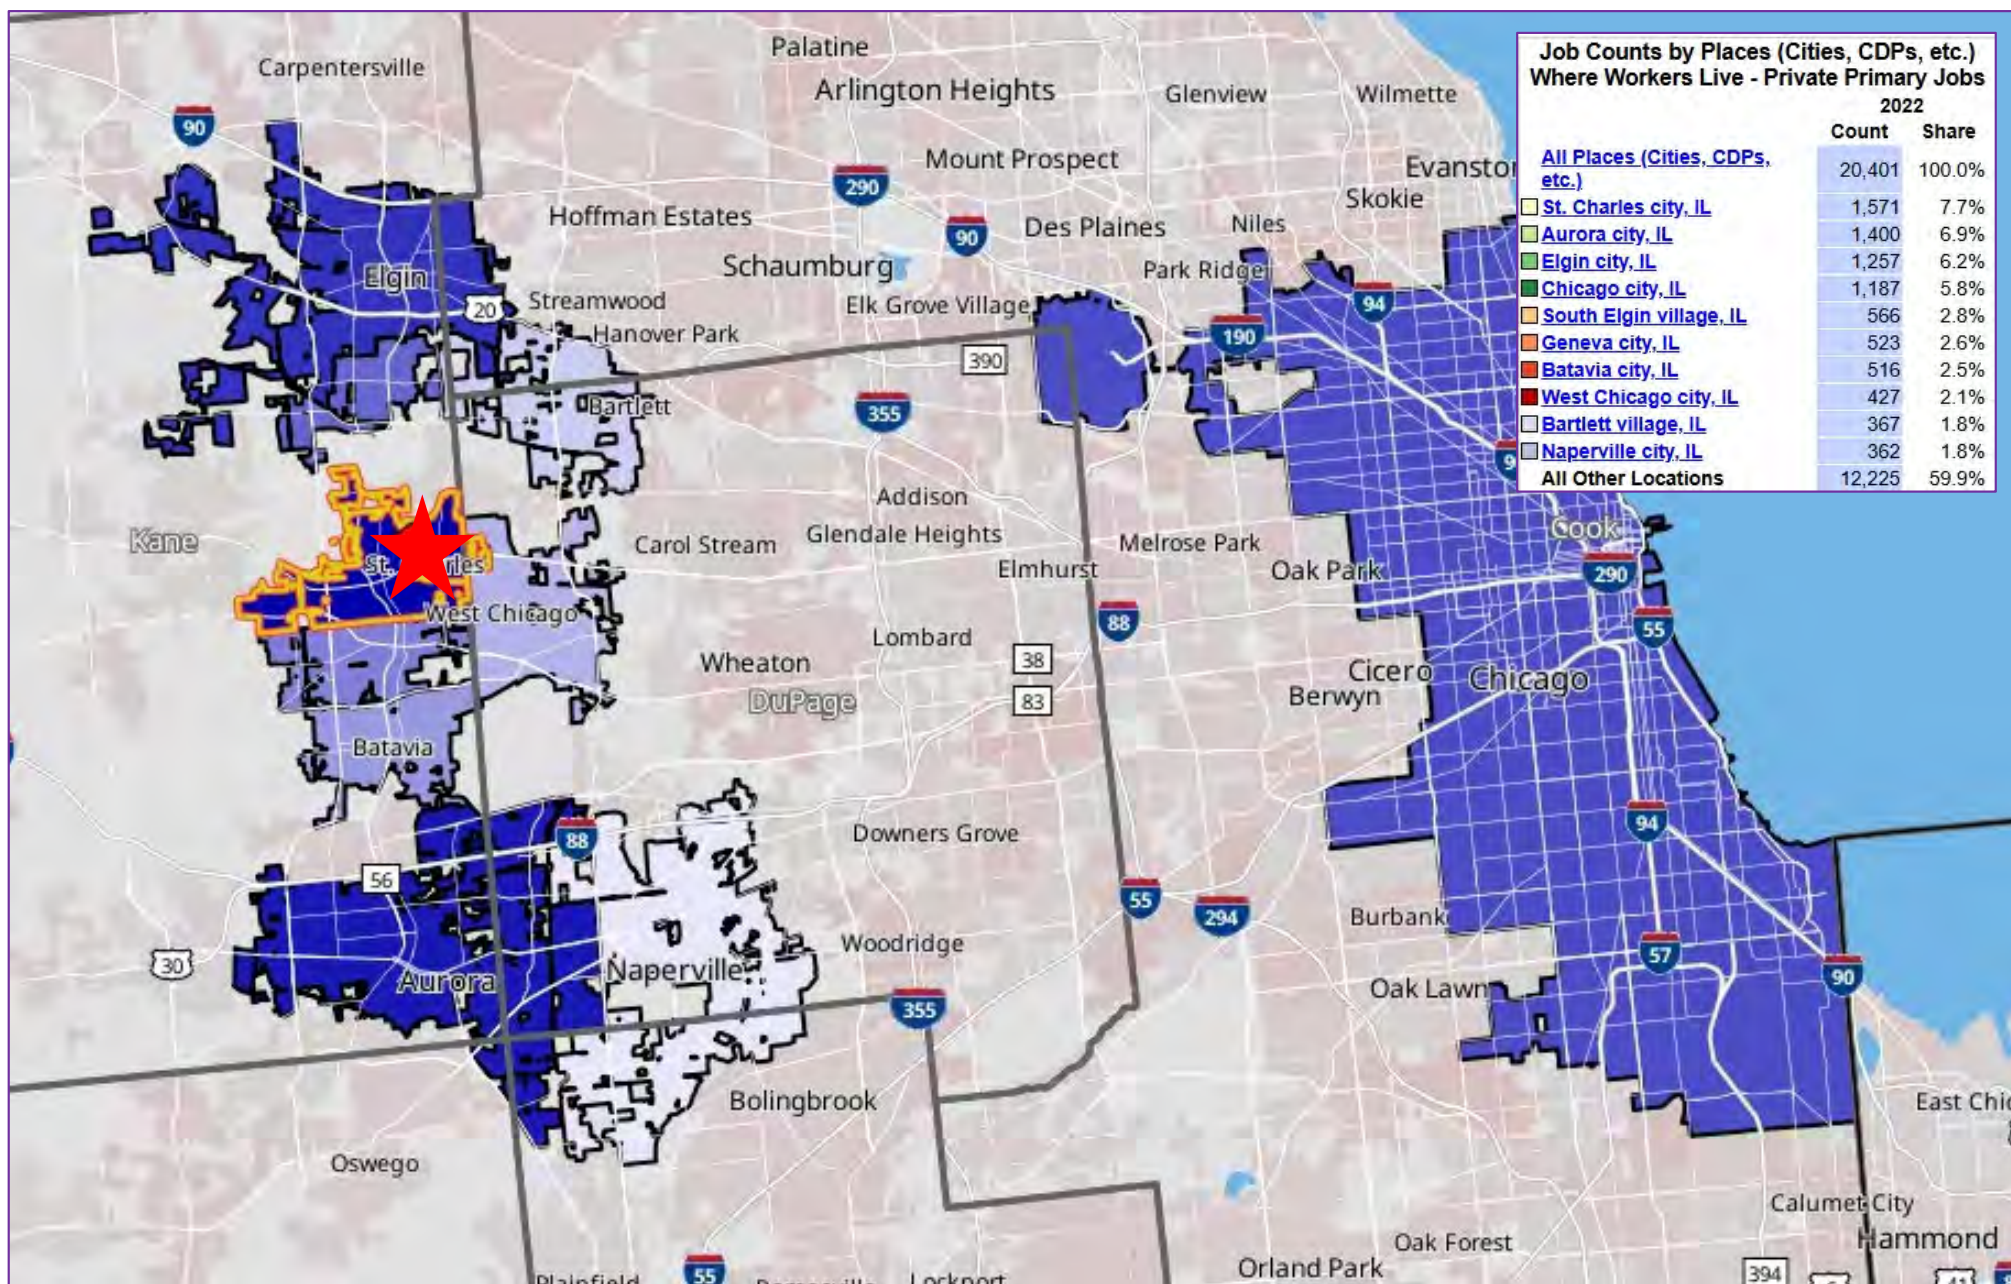

The main factor contributing to the success and value of new rental communities is their proximity to employment opportunities. The map below illustrates typical commute times during rush hour (7:30 a.m.). The subject property is located within 45 minutes of the entire I-88 employment corridor.

Source: TravelTime Maps, Housing Trends, LLC

Location Analysis – Commute Destination Map

A large percentage of workers living in St. Charles remain in the Fox Valley for employment.

Competitive Analysis

Competitive Analysis – Key Comparables Detail

Below are the details of six active comparable communities that we reviewed in the Comparative Market Analysis (CMA) and identified as key comparisons to the subject property. The primary comparable community is The Springs at St. Charles, located approximately a quarter-mile northwest of the subject property. The Springs features new, traditional garden-style apartments, and some units come with attached one-car garages.

*Notes:

1/ Parking type definitions:

- O = Open
- CG = Covered Garage
- A = Assigned Space In Lot
- DAG = Direct Access Garage
- AG = Attached Garage (No Direct Access)
- DG = Detached Garage

2/ All concessions are translated into a monthly discount on rent, as follows:

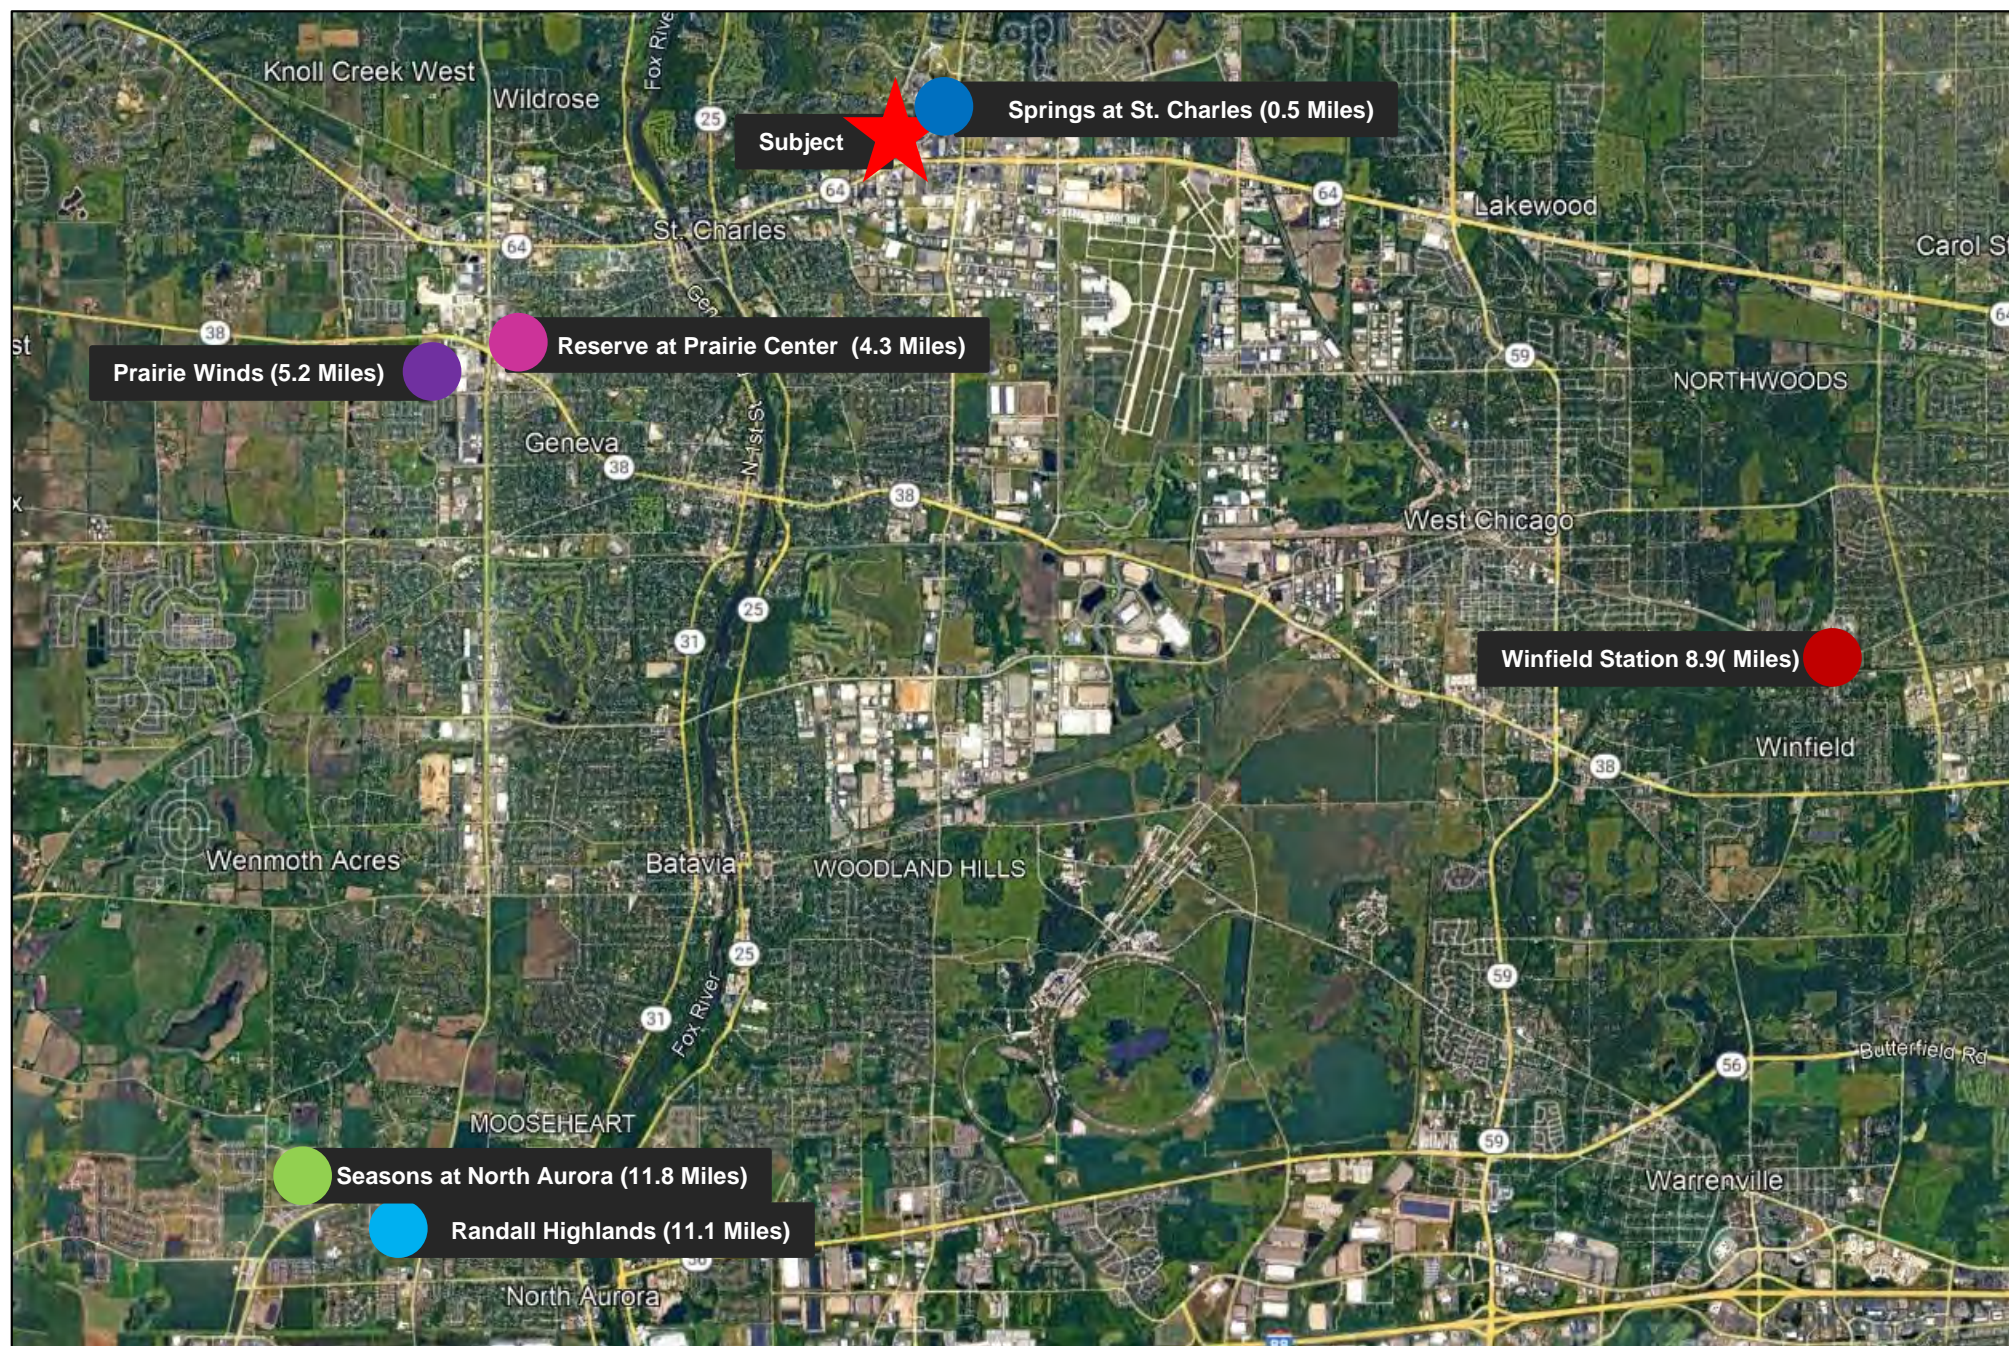

- Direct = A direct discount to the normal rate.
- Indirect = Other discounts, such as "\$500 off the first month".

Competitive Analysis – Primary Comparables Summary – Amenity Comparison

Below is a comparison of the amenities offered at the comparable communities. We recommend that the Subject, at a minimum, match the amenities offered at these communities. We also recommend that the townhome units have access to the amenities offered at the multi-family units.

| Amenity | Comparable Projects | | | | | |
|-----------------------------------|--|--|---|---|---|--|
| |  Springs at St. Charles |  Reserve at Prairie Centre |  Prairie Winds |  Winfield Station |  Seasons at North Aurora |  Randall Highlands |
| Parking | Surface parking included with rent. Detached garages available. Certain units include direct access garages. | Surface parking included with rent, garage parking \$75/mo. | Surface parking included with rent | Surface parking included with rent. Detached garage parking available for \$200/mo. | Surface parking included with rent. | Attached two-car garage included with each unit |

Competitive Analysis – Private Townhome Rentals – St. Charles Area

Economic Analysis

Economic Analysis – Chicago MSA Employment Growth

The Chicago MSA has had relatively strong employment growth since the end of the Covid-19 Pandemic, but began to slow as interest rates increased. We anticipate that economic growth will maintain its current level through 2025 and begin to increase slightly as the Fed slowly decreases interest rates.

Source: BLS, Housing Trends, LLC

Economic Analysis – Chicago MSA Employment Growth

The chart below shows the steady decline in employment growth over the past three years.

Source: BLS, Housing Trends, LLC

Economic Analysis – Chicago MSA Unemployment Rate Trends

The unemployment rate in the Chicago MSA has mostly remained in the 4.0% to 5.0% range since late 2021. Since the beginning of 2025, unemployment rates have increased to above 5.0%.

Source: BLS, Housing Trends, LLC

Economic Analysis – Chicago CSA Single-Family Building Permit Trends

In 2024, single-family building permit activity reached its highest level since 2007. However, single-family permits are still well below the levels reached prior to the Great Recession.

Source: BLS, Housing Trends, LLC

Economic Analysis –Building Permits Trends – Kane County

In 2024, Kane County building permits reached their highest level since 2007. This growth has largely been driven by a shortage of existing homes in the local market, creating significant opportunities for homebuilders. Additionally, multi-family construction activity has remained relatively steady over the past decade.

Source: SOCDS, Housing Trends, LLC

Economic Analysis –Building Permits Trends – 7.5-Mile Radius

To assess permit activity within a 7.5-mile radius of the subject site, we reviewed all municipalities located within that area. The total number of permits listed in the table below estimates the overall permit activity within this radius.

Economic Analysis – Chicago MSA – Existing Home Trends

Existing home sales volumes are well below the pace set in the past few years, primarily due to the lack of resale inventory in the market, which can be attributed to sellers reluctance to list their homes for sale due to high mortgage rates.

| Detached | 2024 Sales | Sales Annual Change | Dec. 2024 Inventory | Inventory Annual Change | Dec. 2024 Months of Supply | Months of Supply Change | Dec. 2024 Median Sales Price | Median Sales Price Change |

Assumptions and Limiting Conditions

The conclusions and recommendations presented in this report are based on our analysis of the information available to us from our own research and from the client as of the date of this report. We assume that the information is correct and reliable and that we have been informed about any issues that would affect project marketability or success potential.

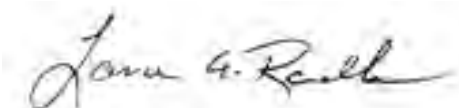

Our conclusions and recommendations are based on current and expected performance of the national, and/or local economy and real estate market. Given that economic conditions can change and real estate markets are cyclical, it is critical to monitor the economy and real estate market continuously and to revisit key project assumptions periodically to ensure that they are still justified.

The future is difficult to predict, particularly given that the economy and housing markets can be cyclical, as well as subject to changing consumer and market psychology. There will usually be differences between projected and actual results because events and circumstances frequently do not occur as expected, and the differences may be material. We do not express any form of assurance on the achievability of any pricing or absorption estimates or reasonableness of the underlying assumptions.

In general, for projects out in the future, we are assuming “normal” real estate market conditions and not a condition of either prolonged “boom” or “bust” market conditions. We do assume that economic, employment, and household growth will occur more or less in accordance with current expectations. We are not taking into account major shifts in the level of consumer confidence; in the ability of developers to secure needed project entitlements; in the cost of development or construction; in tax laws that favor or disfavor real estate markets; or in the availability and/or cost of capital and mortgage financing for real estate developers, owners and buyers. Should there be such major shifts affecting real estate markets, this analysis should be updated, with the conclusions and recommendations summarized herein reviewed and reevaluated under a potential range of build-out scenarios reflecting changed market conditions.

We have no responsibility to update our analysis for events and circumstances occurring after the date of our report and our study is deemed completed upon delivery of the final report. Unless otherwise specified, we are not responsible for any updates to our study or recommendations. We would be happy to provide an updated study at any point in the future for an additional fee.

Respectfully submitted,
