

What is The Compliance Engine (TCE) — and Why It Matters to You as a Business Owner

The Compliance Engine (TCE), powered by BRYCER, is a secure web-based platform your local fire department uses to track and manage required fire and life safety inspections.

Your licensed service provider submits inspection, testing, and maintenance reports through TCE — ensuring your property stays compliant, protected, and visible to the AHJ.

How It Works

1. Your service provider completes your required inspection or test.
2. They upload the report directly to The Compliance Engine.
3. The fire department reviews and tracks deficiencies in real time.
4. You receive notifications and updates through your premise access account.

Your Premise User Access

With TCE's Premise User Access, you can:

- ✓ View inspection status and due dates
- ✓ Receive automated reminders before inspections are due
- ✓ Access all past reports in one secure location
- ✓ Track when deficiencies have been corrected by your provider

This visibility helps you stay proactive and confident that your facility remains compliant year-round.

Benefits of Premises User Access

1 Keep Compliant

When your service provider submits inspection reports through TCE, your fire department receives confirmation instantly. This ensures your building meets local and state code requirements — avoiding fines, citations, or compliance delays.

2 Protect Property and occupants

Verified reports mean your fire and life safety systems are maintained, reducing false alarms, improving response readiness, and keeping your people and property safe.

3 Gives You Complete Visibility

You'll have access to your own Premise User Portal — a simple, view-only dashboard showing system types, inspection dates, and deficiency status for each property you manage.

4 Eliminates Paperwork + Guesswork

No more misplaced inspection reports. Every document is securely stored and available 24/7 in one place.

5 Supports Public Safety

By partnering with your local fire department and using TCE, you help strengthen community safety without adding administrative burden to your business.

Strengthening Safety Through Partnership

- No registration fees or setup required.
- Supported directly by your local fire department's 24/7/365
- Customer support available for questions or access help.

When your service provider submits through The Compliance Engine, your fire department can act faster, resolve deficiencies sooner, and protect your community more effectively.

How to Get Started

Contact Your Local
Fire Department

Your Systems

Stay Notified and
Compliant

Together with your service provider and local fire department, you'll help strengthen public safety by keeping every system tested and every report accounted for.

Together, we're building safer communities — one system at a time.
