**ORIGINAL:** DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The St. Charles City Building is a rectangular red brick two story well composed example of Eclecticism. The Victorian structure was placed adjacent and parallel to the Fox River on the west in 1892, with its main entrance facing east. The exterior three-bay facade was capped with a hip roof that has a graceful bell tower extension at the southern peak. This bell tower has a Victorian styled skeleton capped with a Byzantine type of roof. The main hip roof was detailed with clerestory windows of eye lid design which was characteristic of the H. H. Richardson's Shingle Style of the 1870's. The roof soffit is decorated and supported with wood brackets reminiscent of that seen in Victorian architecture.

The middle bay of the three bay facade, creates the entrance with a vertical continuation of the brick face through the roof soffit to create an open-face pediment with three rectangular windows. On the three corners of the pediment gable are stone sculptures. This pediment creates a larger dormer for the attic which is characteristic of the Victorian style. The main entrance is stilted arched doorway with an eight course brick rowlock arch concluded with a galvanized iron moulding balanced on each side with two small rectangular window

The fenestration consists of stilted arched and rectangular double hung windows of Victorian style and composition. The first floor of the front facade is assymetrical with two large arched windows north of the main entrance and a larger arched double door for service to the south. The two arched windows have a four course brick rowlock arch, and the service door has a six course brick rowlock arch. The second floor is symmetrical with three smaller arched windows above the main entrance and is bordered on each side with two rectangular windows.

The interior is basically symmetrical. Upon entering, there is a straight run stair case leading to the second floor. On the first floor, the stairs separate two large rooms. On the second floor there is also two large rooms on each side of the stairs, with two smaller rooms in the front above the entrance.

**PRESENT:**

The north room on the first floor has been modified to house electrical switch gear for an electric substation. To provide security for this room the two large arched windows have been changed with the insertion of glass block and brick, and a precast concrete ceiling was installed. An additional entrance has been constructed directly south of the main entrance so that circulation to the upstairs could be maintained.

The roof, soffit, and downspouts have deteriorated. Loose copings have caused leakage into the masonry and corresponding efflorescence. There is some plaster deterioration and the floor undulates due to lumber shrinkage variations. The present state of the building is one of ill-repair and recently certain exterior portions of it have been declared structurally unsound. It is the City's intention to enlist every practical means in an effort to preserve the structure.

SPECIFIC DATES 1892

BUILDER/ARCHITECT F. W. Alexander

## STATEMENT OF SIGNIFICANCE

The St. Charles City Building, constructed by F. W. Alexander, a local builder, offers significant contributions in the areas of architecture, politics and government. Architecturally, the building exemplified eclecticism incorporated in a Victorian style. Some architectural characteristics of note include the Victorian styled bell tower, capped with a Byzantine type roof, the clerestory windows of eye lid design, the main entrance stilted arched doorway with eight course brick rowlock arched, concluded with a galvanized iron moulding balanced on each side by two small rectangular windows and the fenestration which consists of stilted arched and rectangular double hung windows of Victorina style and composition. These features have been preserved to some extent and can be, through a proper effort, brought back to the form which characterizes their unique element of design.

The structure was the first building the City had designed specifically for government and public meeting use. It was used for the aforementioned purposes from 1892 to 1941, which qualified the building as being significant under the criteria of politics and government. It continued to provide a base of operations for the law enforcement branch of the government and as the City's only fire house until 1962. The building's accessibility, due to its central location and availability, after the construction of the City's new Municipal Center in 1941, made it possible for the 16th Judicial Circuit Court to conduct its business on the second floor of the structure in the 1950's and 1960's.

## HISTORY

A quote from an edition of the Valley Chronicle, the local paper, in January of 1900, amply explains the birth of the structure: "It was not until the year 1892 that our citizens began to realize the importance of having some sort of structure that could be referred to as "City Hall". It was under Mayor A. H. Bennett that the thought became a reality. The property where the building now, and originally, stands was purchased from Mr. B. T. Hunt for \$1,500.00 in 1891. On March 12, 1892, the City Council voted to accept the bid of F. W. Alexander to erect the City building....for the price offered, \$5,496.00.

The name carved in stone on the front of the structure "City Building" could not have been more appropriately chosen, as even to this day the structure plays a vital part in the operation of the city. Valuable electrical and water monitoring systems, the meter department and the core of the building maintenance function are housed in it.
