

RAYMOND P. ROGINA *Mayor*

MARK KOENEN, P.E. *City Administrator*

January 22, 2018

Dear Resident:

The City of St. Charles Public Works is dedicated to providing safe and reliable electrical service to the residents of St. Charles. Electric Services is currently upgrading our mainline cable facilities in your neighborhood.

Archon Construction is the electrical contractor working for the City to install underground conduit for the cable upgrades. This work will be performed primarily between the hours of 7:00 a.m. to 3:30 p.m., Monday through Friday, but some Saturday work may be necessary. The installation of the conduit by the contractor will be followed by City crews installing new cable. We are anticipating the contractor work to be three to four weeks, and the City cable work to be an additional three to four weeks. Weather delays may impact our schedule.

No electrical service outages are anticipated to be required related to this upgrade work.

All attempts to keep disruptions of landscape to a minimum during the course of this project will be taken into account. Restoration will take place after all the associated work has been completed and weather permits. Should you have further questions in regard to landscaping, please contact Ray Karos at 630-816-0899.

Please notify Archon Construction at the above number should you have underground sprinklers, private electric lines, or underground electric dog fences. City of St. Charles Public Works appreciates your cooperation in this matter. If you have any questions or concerns pertaining to the upcoming work, please contact the City's project engineer, Steve Shroba at 630-377-4407. A map of the project extents and updates are on the City of St. Charles website by clicking on the Public Improvement Projects on the bottom of the front page of the website.

Best Regards,

Thomas Bruhl
Electric Services Manager

Heritage. Community. Service. Opportunity.
