Mr. John Lamb Environmental Services Manager City of St. Charles 2 E. Main Street St. Charles, IL 60174

Dear Mr. Lamb:

Re: 14201-03 City of St. Charles, Repair Cracking at Wells 3 & 4 Reservoir, Recommendation

The city of St. Charles has an existing partially buried concrete ground storage tank located along North 1st Avenue and the Fox River at the Wells 3 & 4 site that was constructed in 1985. In March 2014, CMT conducted a site visit to visually inspect vertical cracking at the northwest and southwest corners of the reservoir. The cracking at the northwest corner was only observed on the west wall of the tank. The cracking at the southwest corner was observed on both the west wall and south wall. The vertical cracking extends from existing grade up to near the top of the walls with the most severe cracking observed in the approximately first six feet above existing grade.

Based on the site inspection and evaluation of the record drawings, CMT recommended externally reinforcing the corners with a carbon fiber wrap to prevent further deterioration of the reservoir wall corners. This requires excavation beyond the bottom of the cracks, removal of exterior coating to the limits of the fiber wrap, removal of the deteriorated concrete along the cracks, replacement of deteriorated concrete, and application of the carbon fiber wrap. It also anticipated that some of the existing reinforcing will need to be cleaned of rust and protected from further corrosion by including a corrosion inhibitor in the concrete repair material. The fiber wrap will extend beyond the cracks to provide sufficient load transfer length (lap) and sufficient bond length to achieve a capacity of the fiber wrap that meets or exceeds the capacity of the existing reinforcing steel. After sufficient curing of the materials, a compatible coating will then be applied to blend in with the existing coating. After the coating has cured, excavations will then be backfilled and ground surfaces restored.

The above recommended improvements were incorporated into a Request for Proposals (RFP). CMT contacted a fiber wrap manufacturer to identify Contractors qualified to perform this specialized work. Four qualified Contractors were invited to submit a proposal. Two proposals were received on Monday, September 8, 2014. The Contractors that responded to the Request for Proposals were Sitar Construction from St. Charles, Illinois and Vector Construction from Decatur, Illinois.

Crawford, Murphy & Tilly

Centered in Value

The lowest proposal was submitted by Sitar Construction of St. Charles, Illinois in the amount of \$62,000. The other proposal was submitted by Vector Construction of Decatur, Illinois in the amount of \$74,200. The proposal breakdown was as follows:

Description	Sitar Construction	Vector Construction
Mobilization/Demobilization	\$5,000	\$2,750
Sitework	\$5,000	\$10,750
 * Including Excavating, Backfill & Surface Restoration (less Bike Path) 		
Concrete Repair	\$18,000	\$26,950
 * Including Demolition, Sawcutting, Surface Prep, Corrosion Inhibitor, Form and Pour, Strip Forms, Rub/Finish, & Clean-up/Haul debris 		
Carbon Fiber Wrap	\$28,000	\$27,250
* Including Surface Prep, Fill Minor Voids (if any), Apply Epoxy Adhesive, Saturate Carbon Fiber Fabric, Apply Wrap and two coats of UV Protection		
Miscellaneous	\$6,000	\$6,500
 * Including Exterior Coating Repair, Interior Coating at the west corners & all work not described in the items above 		
TOTAL	\$62,000	\$74,200

The original budgetary cost estimate for the work was estimated at \$45,000 earlier this year. However, given the bidding climate and the limitation of the specialized Contractors to perform non-specialized work such as excavation, backfill and restoration, we believe that the amount of the lowest proposal (\$62,000) is reasonable. Based on the information above, Crawford, Murphy & Tilly, Inc. recommends that the City award the contract for Wells 3 & 4 Reservoir Repairs to Sitar Construction of St. Charles, Illinois in the amount of \$62,000.

We are available at your convenience to discuss any of the information presented herein. Please contact me if you have any questions regarding any of the above information.

Sincerely,

CRAWFORD, MURPHY & TILLY

Theresa L. O'Grady, P.E.
